
[Glass Wool Production Line \(Glass Wool Machinery\)](#)

Glass Wool Production Line (Glass Wool Machinery)

Glass wool is manufactured by processing molten glass into fibers through the use of spinning process. Its reliable thermal and sound insulation performance make it widely applied in construction and many other fields.

As a professional glass wool machinery manufacturer in China, we can offer reliable glass wool production line to customers.

Our glass wool machinery can be used to produce different glass wool products, to meet your different insulation requirements.

Technical Parameter of Glass Wool Production Line (Glass Wool Machinery)

Specification	
Capacity	2000 tons - 20000 tons every year
Raw material	Sand, feldspar, dolomite, calcined soda, borax, limestone, others
Fuel	Natural gas or heavy oil

Process Chart

Feeding Machine

The reliable feeding system, together with the windlass, can efficiently transfer the materials to the melting furnace.

Melting System

Our glass wool production line is provided with high quality furnace to ensure the reliable melting performance. The furnace consumes low energy and needs little maintenance.

Spinner

Centrifugal drawing of the glass is carried out through the rotating device drilled with holes.

[Curing Oven](#)

Our curing oven has obtained patent. The pretreated wool is cured in the curing oven. In the meantime, additives could also be added selectively, so as to produce glass wool board and blanket, etc.

Blanket Rolling Machine

Blankets are rolled into a bundle on this machine.

Packaging Machine

Our glass wool production line is also fitted with packaging machine to pack the finished products, thus facilitating the delivery.

Blanket Stitching Machine

With the help of blanket stitching machine, blanket could be strengthened with glass fabric or wire mesh. The processed blanket enjoys higher strength.

Pipe Rolling Machine

Pipe section of glass wool could be manufactured by using pipe rolling machine.

We are a premier manufacturer of glass wool production line in China with over 30 years experience in mechanical manufacturing. Apart from complete production line, our expertise is also reputed in providing all range of technology upgrade and reinforcement.

Besides all kinds of insulation equipment such as rock wool, glass wool, ceramic fiber production line we are also leading in supplying material processing and handling equipment like plastic pipe making machine, roll forming machine, cranes etc.

If you want to know more detailed information, please feel free to contact.
