
[Sandwich Panel Production Line \(Sandwich Panel Equipment\)](#)

Sandwich Panel Production Line (Sandwich Panel Equipment)

A sandwich panel is made up of a light weight core and two layers of thin and durable facings. Our sandwich panel production line can be used to produce a wide range of sandwich panels with insulating core materials. The core materials can be rock wool, glass wool, rigid PU, PIR, EPS, XPS, phenolic foam. The facing materials can be steel, aluminum, plasterboard, plywood, GRP sheet, aluminium foil, polyethylene, mineral fiber, paper, and others.

Our sandwich panel equipment is able to manufacture various sandwich panels efficiently and enhance the inherent outstanding performance of sandwich products.

Application

Our sandwich panel production line, as its name suggest, is designed to produce sandwich panels which are applicable for commercial buildings, flat roofing, external cladding, partition walling, agricultural storage, refrigerated transport, cold stores, food production facilities, and shipbuilding, and so on.

Technical Parameter of Sandwich Panel Production Line (Sandwich Panel Equipment)

Item	Parameter	
Mode option	Continuous	Discontinuous
Production speed	0 - 10 m/min	
Facing thickness	0.3 - 0.8 mm	
Core thickness	20 - 300 mm	
Panel size	W 700mm - 1100mm, L 2.5m - 15m	
Annual throughput	Up to 900,000m ²	
Overall Dimension (LxWxH)	40m×2.5m×3m	

Our sandwich panel system gives builders the real edge.

We are a premier manufacturer of sandwich panel production line in China with over 30 years experience in mechanical manufacturing. Apart from complete production line, our expertise is also reputed in providing all range of technology upgrade and reinforcement.

Besides all kinds of insulation equipment such as rock wool, glass wool, ceramic fiber production line we are also leading in supplying material processing and handling equipment like plastic pipe making machine, roll forming machine, cranes etc.
